

# 24® GAME

## COLOR MATH MASHUP!

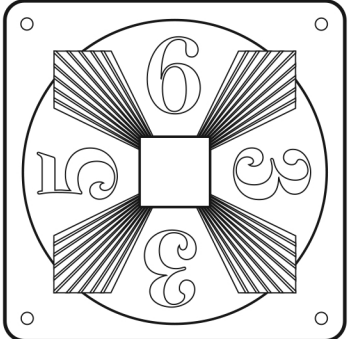

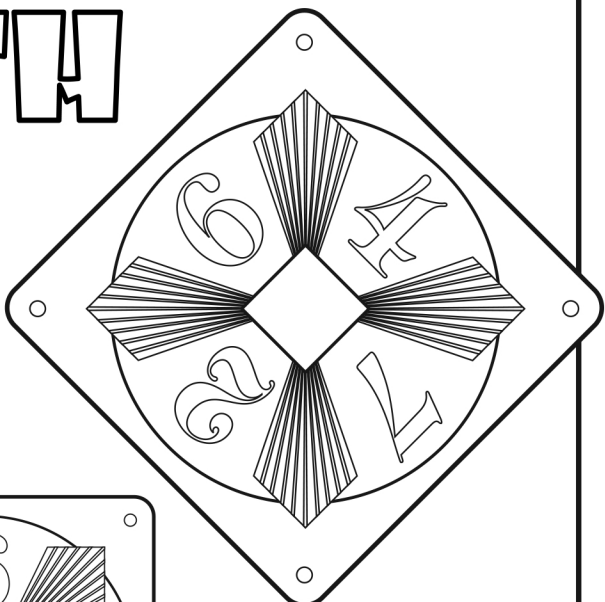

Can you make 24 from the four numbers on each card?

**It's easy - and sometimes it's hard - but that's what makes it FUN!**

The object of the game is to make 24. You can add, subtract, multiply & divide. Use all four numbers on a card, but use each number only once. You will need at least three steps to find your solution—there is at least one solution to every card!

Example for this 24 Game card: >>>>>>>>>>>>>>>>>>>

$6 + 3 = 9$       $3 \times 5 = 15$       $15 + 9 = 24$

*Solve then color, or color and solve - create some "custom" 24® cards your own way!*
